

$$(x + a)(x + b) = x^2 + (a + b)x + ab$$

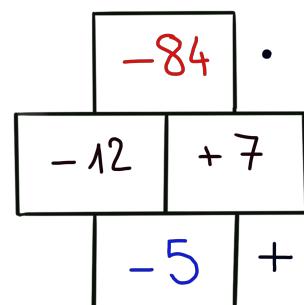

Factoriser : $x^2 + 11x + 24$

Solution : $x^2 + 11x + 24 = (x + 8)(x + 3)$

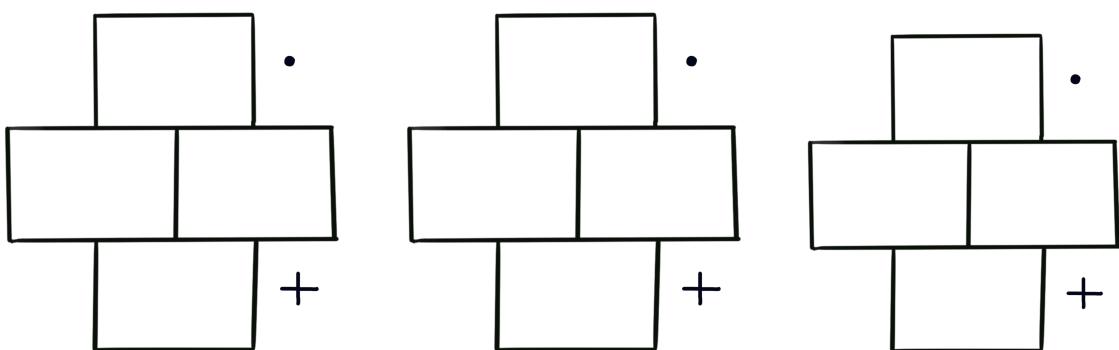

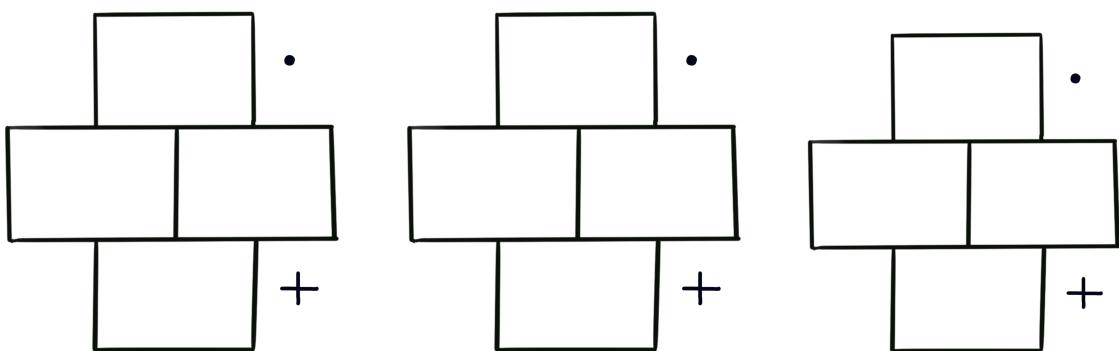

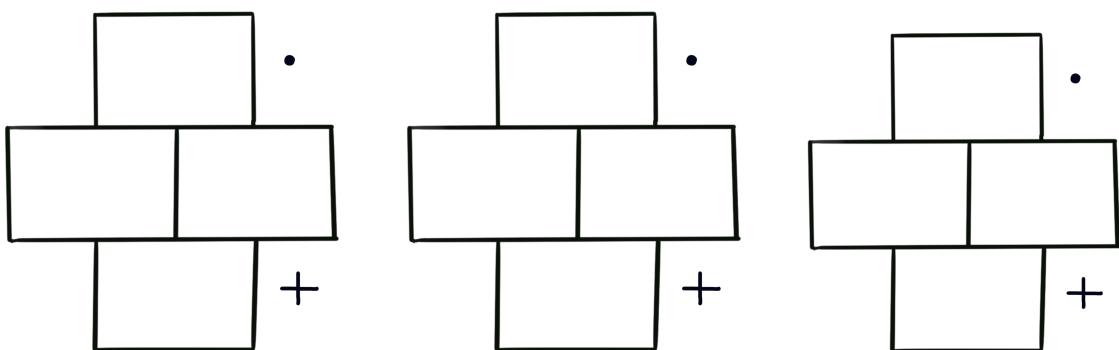

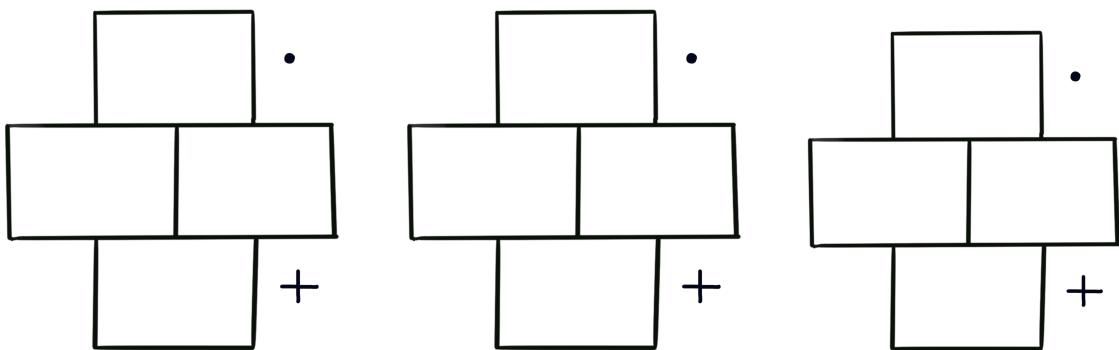

Factoriser : $x^2 - 5x - 84$

$$\begin{aligned}-12 \cdot (+7) &= -84 \\ -12 + (+7) &= -5\end{aligned}$$

Solution : $x^2 - 5x - 84 = (x - 12)(x + 7)$

$$(x + a)(x + b) = x^2 + (a + b)x + ab$$

$$(x + a)(x + b) = x^2 + (a + b)x + ab$$
